Sessions and modules

The first module covers the basic concepts of the course, including the history of the field, the current state of research, and the key theories and models. The second module focuses on the development of the research design, including the selection of the research question, the identification of the variables, and the choice of the research method. The third module covers the data collection and analysis, including the use of statistical software and the interpretation of the results. The fourth module discusses the ethical considerations of research, including the protection of human subjects and the use of confidential information. The fifth module covers the writing of the research report, including the structure of the report, the use of academic writing, and the presentation of the findings.
